SUMMARY

UX Engineer with 2+ years of professional frontend experience building web products with React, Next.js, TypeScript and JavaScript, alongside a First Class MSc in Creative Digital Media & UX. I enjoy working across UX, interaction design, prototyping and frontend development rather than treating design and engineering as separate stages. I like understanding how a user flow should work, shaping the experience around it, and then actually building the finished interface, with a focus on responsive, accessible and polished experiences.

SKILLS

UX & Design: Interaction Design, User Flows, Wireframing, Prototyping, UX Research, Usability Testing, Mobile-First Design, Accessibility / WCAG Principles, Figma

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Angular, Vue, React Native

UI Engineering: Reusable Components, Design Systems, Client-Side State, Responsive Interfaces, Cross-Browser Development, Micro-interactions

Backend & Data: REST APIs, JSON, Node.js, Express, PostgreSQL, Supabase, Firebase, Authentication

Tools & Workflow: Git, GitHub, Agile/Scrum, Debugging, Code Reviews, Functional Testing

EXPERIENCE

Frontend Engineer

Pixel Forge Design Ltd | Dublin, Ireland | May 2025 – October 2025

- Built and shipped 13 responsive pages across 14 routes for a production sports-management platform using React, Next.js, TypeScript and Tailwind CSS.
- Built three complete user journeys covering game creation, player joining and checkout/payment, taking them from product requirements and designs through to working interfaces.
- Integrated authentication, dashboard, booking and payment APIs, handling frontend state, validation and different user and application states.
- Worked closely with product, design and backend developers to refine how flows behaved, solve integration issues and keep the experience consistent across screens and devices.
- Tested and debugged responsive behaviour, edge cases and frontend issues through release, with attention to both usability and visual detail.

Associate Frontend Developer

Experion Technologies | Kerala, India | Nov 2022 – Aug 2024

- Worked across 5+ enterprise and internal products in healthcare, finance, education, logistics and supply chain using React, Angular, Vue, TypeScript and JavaScript.
- Built reusable UI components and shared TypeScript patterns, helping keep interfaces consistent as products and requirements grew.
- Built data-heavy financial interfaces with AG Grid, turning complex business data into structured, filterable and easier-to-navigate screens.
- Developed UI screens for an Angular healthcare application and connected frontend features with REST APIs.
- Worked with UX/design, product, backend and QA teams through implementation, debugging, testing, code reviews and releases.
- Built responsive HTML email templates for a US healthcare product, working within visual specifications and the constraints of different email clients.

SELECTED WORK

CoachCanvas - Football Club Management Application

I wanted to understand how football managers actually organise match days before deciding what the product should look like. I worked from user research and early flows through wireframing, prototyping, development and usability testing.

- Designed end-to-end flows for onboarding, clubs, events, player availability, formations and live match interactions.
- Built the application in React Native and TypeScript, taking the same experience from Figma/prototypes into the working product.
- Used usability testing and feedback to find friction in flows and refine interactions rather than treating the first design as finished.

Waypoint (Career Intelligence) - AI Career Intelligence Platform

Built an end-to-end product around a fairly messy UX problem: helping someone understand how their actual experience matches a job without overwhelming them with information.

- Owned the user flows, information structure, interaction decisions and frontend implementation.
- Designed interfaces for presenting complex CV and job information in a way that could be scanned and understood quickly.
- Tested with early users and iterated on workflow states, loading/error states, redirects and interface behaviour.

EDUCATION

MSc Creative Digital Media & UX (*First Class Honours* **)**
Technological University Dublin, Ireland | 2024 - 2026

- UX research, interaction design, information architecture, prototyping, usability testing and user-centred product development.

BTech Computer Science & Engineering
APJ Abdul Kalam Technological University Kerala, India | 2018 - 2022
